WORK EXPERIENCE

Software Engineer Intern

Smarsh

Aug 2025–Jan 2026

Bengaluru, India

- Designed and deployed **highly available, fault-tolerant** event-driven Kafka **microservices** in **Java**/Spring Boot to classify millions of email/XML records under production load.
- Resolved a critical **S3 document retrieval** production defect by identifying filename mutation issues during reprocessing and developing a **REST API** to restore original filenames, eliminating manual file lookups.
- Diagnosed and resolved **live-service** defects across **distributed** Kafka-based microservices by **analyzing logs**, dependency graphs, and message flows, reducing recovery time and improving **platform reliability/uptime**.
- Redesigned S3 data layout using prefix-based partitioning, cutting retrieval latency by **35%** and **lowering infrastructure costs**. Built **JUnit/Mockito automated tests** to validate business logic before deployment.
- Scaled distributed ingestion throughput to **5000+ objects/sec** through batch-oriented processing, optimized access patterns, and concurrency tuning while preserving fault tolerance and availability.
- Automated **CI/CD deployment pipelines** (Jenkins, Argo CD) and semantic versioning across **15+** microservices; configured **Datadog** dashboards to **monitor performance and cost** of server infrastructure.

Tech Stack: Java, Spring Boot, Microservices, REST APIs, Kafka, Docker, Jenkins, Argo CD, MongoDB, AWS S3

EDUCATION

CMR College of Engineering & Technology

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.01/10.0

2022–2026

Narayana Junior College

Intermediate (MPC)

Percentage: 98.0%

2020–2022

PROJECTS

ComplyVault | *Java, Spring Boot, Kafka, Hibernate/JPA, PostgreSQL, MongoDB, Maven, Elasticsearch, Docker*

- Architected a multi-tenant **compliance** platform using Spring Boot Kafka event streams to support scalable **document ingestion, audit workflows**, and policy enforcement across isolated tenants.
- Designed persistence layers spanning **relational (PostgreSQL)** and **NoSQL (MongoDB)** databases via Spring Data JPA/Hibernate for efficient **multi-tenant** storage of large audit datasets. Built a **compliance engine** using Chain of Responsibility pattern to automatically flag violations.
- Engineered a low-latency full-text and keyword-based fuzzy search pipeline across **1M+ documents**, achieving **sub-200ms p95** query latency through indexing, SQL query optimization, and efficient Elasticsearch mappings.

Rate Limiter | *Node.js, Express.js, Redis, Axios, REST APIs, Rate Limiting Algorithms*

- Built a Redis-backed distributed rate limiter using the **Fixed Window algorithm** to protect APIs from abuse/bot traffic and ensure **high availability** under burst loads.
- Used **atomic Redis operations (INCR, EXPIRE)** to ensure consistency and correctness under high concurrency.
- Benchmarked the system under **10,000+** concurrent requests, validating throughput, and fault tolerance.

ChatApp | *React, Express.js, MongoDB, JWT, Tailwind CSS, Axios, Zustand, Render*

- Built a real-time messaging system using WebSockets, achieving **sub-100ms** message latency for bidirectional communication.
- Implemented **JWT authentication** and secured REST APIs using HTTP-only cookies and middleware-based auth controls.
- Built responsive React components while optimizing rendering performance through lazy loading, conditional rendering, and skeleton UI patterns, resulting in a **35%** reduction in client-side latency and faster UI updates during active usage.

TECHNICAL SKILLS

Programming Languages: Java, C++, JavaScript, Python

Backend Technologies: Spring Boot, Node.js, Express.js, Microservices, Kafka, Hibernate/JPA, REST APIs, JWT

Databases: Relational – MySQL, PostgreSQL | NoSQL – MongoDB, Redis, Elasticsearch

Cloud & DevOps: AWS S3, Docker, Jenkins, Argo CD, Maven, Datadog, Linux, Git, Performance & Cost Monitoring

Frontend Technologies: React.js, Tailwind CSS

Testing: JUnit, Mockito, Unit Testing, Integration Testing, Debugging, Smoke Testing

Coursework: Data Structures and Algorithms, OOPs, DBMS, Distributed Systems, Computer Networks, Operating Systems

ACHIEVEMENTS

- Achieved a Top 5 finish in the Smarsh AI Hackathon 2025 by building an AI-powered solution, reducing processing costs.
- Secured First Place in TechKnowThon-2K24 hackathon organized by Knowvation Learnings Pvt. Ltd.
- Specialist on Codeforces (Max Rating: 1417) and 3 Stars on CodeChef (Max Rating: 1614).
- Solved 1000+ DSA problems across LeetCode, Codeforces, CodeChef, and GeeksforGeeks.
